Chapter 1

Class Index

1.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

BNode	3
BTree	4
RBNode	5
RBTree	7

Chapter 2

Class Documentation

2.1 BNode Class Reference

```
#include <BNode.h>
```

Public Member Functions

- [BNode](#) ()
- [~BNode](#) ()
- void [printSubtree](#) (ofstream &stream)

Public Attributes

- int [values](#) [[size](#)]
- [BNode](#) * [pointers](#) [[size](#)+1]
- string [vizcolors](#) [[size](#)]

Static Public Attributes

- static const int [size](#) = 3
- static const int [empty](#) = -9999

2.1.1 Detailed Description

A node of a B-tree.

2.1.2 Constructor & Destructor Documentation

2.1.2.1 [BNode::BNode](#) ()

Constructs new node with default (empty) values.

2.1.2.2 [BNode::~~BNode](#) ()

Recursive post-order destructor.

2.1.3 Member Function Documentation

2.1.3.1 void BNode::printSubtree (ofstream & *stream*)

Prints subtree of the node into a Graphviz file.

Parameters

<i>stream</i>	Output stream.
---------------	----------------

2.1.4 Member Data Documentation

2.1.4.1 const int BNode::empty = -9999 [static]

Default value.

2.1.4.2 BNode* BNode::pointers[size+1]

Pointers to another nodes.

2.1.4.3 const int BNode::size = 3 [static]

Number of cells in the node.

2.1.4.4 int BNode::values[size]

Values of the node.

2.1.4.5 string BNode::vizcolors[size]

Colors of cells in the Graphviz visualization

The documentation for this class was generated from the following files:

- TreeDemo/BNode.h
- TreeDemo/BNode.cpp

2.2 BTree Class Reference

```
#include <BTree.h>
```

Public Member Functions

- [BTree](#) ()
- [BTree](#) (BNode *root)
- [~BTree](#) ()
- void [visualize](#) (string path, string dot)

2.2.1 Detailed Description

Structure of B-tree.

2.2.2 Constructor & Destructor Documentation

2.2.2.1 BTree::BTree ()

Empty tree constructor.

2.2.2.2 BTree::BTree (BNode * root) [inline]

Filled tree constructor.

Parameters

<i>root</i>	Node to set as the root.
-------------	--------------------------

2.2.2.3 BTree::~~BTree ()

Default destructor.

2.2.3 Member Function Documentation

2.2.3.1 void BTree::visualize (string path, string dot)

Creates visualization of the current state of the tree using Graphviz.

Parameters

<i>path</i>	Where to save the PDF with visualization.
<i>dot</i>	Path to the Graphviz dot utility.

The documentation for this class was generated from the following files:

- TreeDemo/BTree.h
- TreeDemo/BTree.cpp

2.3 RBNODE Class Reference

```
#include <RBNODE.h>
```

Public Member Functions

- void [printSubtree](#) (ofstream &stream, [RBNODE](#) *nil)
- [RBNODE](#) ()
- [RBNODE](#) ([RBNODE](#) *nil, [RBNODE](#) *parent, color_t color, int value)
- [~RBNODE](#) ()

Public Attributes

- int **value**
- color_t color
- [RBNODE](#) * left
- [RBNODE](#) * right
- [RBNODE](#) * parent

Static Public Attributes

- static const color_t `red` = 0
- static const color_t `black` = 1
- static const int `empty` = -9999

2.3.1 Detailed Description

A node of a Red-black tree.

2.3.2 Constructor & Destructor Documentation

2.3.2.1 RBNode::RBNode () [inline]

Constructs new node with default (empty) values.

2.3.2.2 RBNode::RBNode (RBNode * *nil*, RBNode * *parent*, color_t *color*, int *value*) [inline]

Constructs new node with preset values.

Parameters

<i>nil</i>	Nil node reference, will be set as left and right son.
<i>parent</i>	Reference to the parent node.
<i>color</i>	Color of the node.
<i>value</i>	Value of the node.

2.3.2.3 RBNode::~~RBNode ()

Recursive post-order destructor, stops at the Nil node.

2.3.3 Member Function Documentation

2.3.3.1 void RBNode::printSubtree (ofstream & *stream*, RBNode * *nil*)

Prints subtree of the node into a Graphviz file.

Parameters

<i>stream</i>	Output stream.
<i>nil</i>	Nil node to omit.

2.3.4 Member Data Documentation

2.3.4.1 const color_t RBNode::black = 1 [static]

Black color.

2.3.4.2 color_t RBNode::color

Color of the node.

2.3.4.3 `const int RBNODE::empty = -9999` `[static]`

Default value.

2.3.4.4 `RBNODE* RBNODE::left`

Left son of the node.

2.3.4.5 `RBNODE* RBNODE::parent`

Parent of the node.

2.3.4.6 `const color_t RBNODE::red = 0` `[static]`

Red color.

2.3.4.7 `RBNODE* RBNODE::right`

Right son of the node.

The documentation for this class was generated from the following files:

- TreeDemo/RBNODE.h
- TreeDemo/RBNODE.cpp

2.4 RBTREE Class Reference

```
#include <RBTREE.h>
```

Public Member Functions

- [RBTREE](#) ()
- [~RBTREE](#) ()
- void [add](#) (int a)
- bool [find](#) (int a)
- void [remove](#) (int a)
- void [visualize](#) (string path, string dot)
- [BTree btree](#) ()

2.4.1 Detailed Description

Implementation of Red-black trees.

2.4.2 Constructor & Destructor Documentation

2.4.2.1 `RBTREE::RBTREE ()`

Empty tree constructor.

2.4.2.2 RBTREE::~~RBTREE ()

Default destructor.

2.4.3 Member Function Documentation

2.4.3.1 void RBTREE::add (int *a*)

Adds new item into the tree. That is, if the tree doesn't already contain it.

Parameters

<i>a</i>	The item to add, positive integer expected.
----------	---

2.4.3.2 BTree RBTREE::btree ()

Constructs a B-tree corresponding to the current state of the tree.

Returns

Analogical B-Tree.

2.4.3.3 bool RBTREE::find (int *a*)

Searches for item in the tree.

Parameters

<i>a</i>	The item to search for, positive integer expected.
----------	--

Returns

true if the tree contains a node with value equal to *a*, otherwise false

2.4.3.4 void RBTREE::remove (int *a*)

Removes an item from the tree. If the tree doesn't contain this item, nothing happens.

Parameters

<i>a</i>	The item to remove, positive integer expected.
----------	--

2.4.3.5 void RBTREE::visualize (string *path*, string *dot*)

Creates visualization of the current state of the tree using Graphviz.

Parameters

<i>path</i>	Where to save the PDF with visualization.
<i>dot</i>	Path to the Graphviz dot utility.

The documentation for this class was generated from the following files:

- TreeDemo/RBTREE.h
- TreeDemo/RBTREE.cpp
